Fendt passenger seat

High-quality, bearing-mounted folding mechanism

Gas-pressure damper for quick and reliable folding; the seat remains folded up/down thanks to the dead-centre pivot point.
(does not fold up if the passenger rises briefly from the seat).

Good seating comfort

Two large rubber bumpers on the underside of the seat and the high-quality foam used on the seating surface and on the backrest, which is reclined by 3° ensure the best possible seating comfort.

Ready to Fit

Seat can be converted in less than 10 minutes thanks to illustrated installation instructions

Cover variants on request

Company logo, lettering, stitching colour, leatherette or real leather of the highest quality, tanned/dyed, or any type of fabric available on request.

The entire Fendt cab was scanned in 3D in order to develop the best technical solution for a high-quality passenger seat. The pleasantly rounded cushion contour evolved after evaluating various samples.

Countless satisfied customers and passengers confirm that seating comfort is improved!
